ENERGY ANALYTICS

How to use an Energy Monitoring System to achieve energy efficiency in a business.

SimbleSense

1 Identify Costs | Learn how your business consumes energy.
Discover where energy is consumed in your business and what's responsible for your energy costs. The SimbleSense platform will show you which parts of your business are the most costly, so you'll know where to improve.

2 Control Consumption | Manage energy consumption to maximise savings.
Make smarter decisions about energy usage based on smart energy data. The SimbleSense Platform will monitor and control energy usage and help you utilise efficiency upgrades to reduce energy costs.

3 Create a Sustainable Business | Future proof your business
Ongoing monitoring will prevent energy waste, accurately track and monitor energy budgets and empower your business to reduce your ongoing energy costs. The SimbleSense Platform provides data to form long term strategies such as lighting, solar or battery upgrades.
